ACTIVATED SLUDGE EXTENDED AERATION (WWTP)

Remote's Activated Sludge Extended Aeration Wastewater Treatment Plants (ASEA-WWTP) are an efficient means of treating and safely discharging camp or municipal septic waste that would otherwise need to be stored and trucked off-site for disposal. Remote's trained and skilled operators will install the plant and lift stations, winterize it as necessary, and perform all regulatory compliance related monitoring to ensure that the last thing on your mind is your septic treatment system.

best service.

best performance.
